

What's eating your car ... are you protected?™

... NEWEST INNOVATION IN VEHICLE SURFACE PROTECTION

For optimum protection, apply weekly

Help protect with ...

technology to keep your vehicles looking younger™

COMTEC GUARD™

polymer clean, shine, protectant & brightening system

total VEHICLE protection package!

- comtec SHIELD™ undercarriage
- comtec CLEAN™ polymer presoak
- comtec FORTIFY™ brightening presoak
- comtec SHIELD™ surface protectant

Clean. Shine. Brighten. Protect.

COMTEC GUARDS against ...

- harmful UV rays
- chemical pollutants
- road contaminants and brake dust
- underbody corrosion
- acidic bugs
- damaging wildfire residue
- acid rain
- windshield glare on pitted windows
- winter de-icers

and helps protect and brighten ...

- painted vehicle surfaces
- headlight plastic
- black plastic trim
- chrome and alloy wheels
- up to four weeks

Added Plus ... great alternative to an express wax!

Another quality innovation brought to you by

Severe UV and oxidation damage can't be repaired, it can only be prevented.

FYI: UV AND OXIDATION DAMAGE

UV and oxidation damage has been increasingly evident on automotive surfaces in recent years. This is due in part to ...

- 1) Changes in paint compositions to be more compliant with environmental concerns.
- 2) Increased strength of UV rays because of depleting ozone layers.
- 3) Acidic rain from around the world.
- 4) Chemical pollutants in the atmosphere, soil and roads.

• According to a recent item in Popular Mechanics, "clear coat paint is still just paint, and it needs to be waxed (protected) the way paint has always needed to be waxed, to protect the surface from acid rain, airborne dirt, chemicals and UV light."

Damage is accelerated due to some of the following conditions:

- Low humidity and summertime temperatures can push vehicle surface temperatures to an excess of 200 degrees depending on location, making the car finish more susceptible to damage from UV rays and pollutants
- In high humidity areas, many environmental and chemical pollutants are carried in the atmosphere and can end up deposited on vehicle finishes

Bottom line, to protect your car from these damaging elements, you need to wash your car as often as possible and protect with comtec GUARD™
